

CINEMA BOOKING SYSTEM

using PHP and MYSQL

Our project basically manages the ticket booking process of a multiplex, providing an interface to the user to book movie tickets in a more easy way. At the front end we have used PHP and at the back end MySQL server. The project proceeds through a sequence of well-designed forms provided with validations to ensure consistency, reliability and most importantly correctness of information fed into the database.

A large, semi-transparent watermark of the Logicpro Infosystems LPIT Software Solutions logo is overlaid on the page. It consists of the text "Logicpro" in blue, "Infosystems" in red, and "LPIT Software Solutions" in blue below it, with a stylized arrow pointing right to the right of the text.
