

## ***EVENT MANAGEMENT SYSTEM***

using PHP and MYSQL

Our aim is to make a user friendly application that can let a user to plan a decoration for an event. He can select the event and according to the event the appropriate decoration can be made. Choice of decoration can be made from the list of panel. Client will also find out the cost for particular decoration and virtual representation of that particular decoration.

The project will help Clients to decorate for an event and the cost required for particular decoration.
