

## **ONLINE SHOPPING**

using PHP and MYSQL

Shopping Cart System is the Simple shopping Solution. It's a full-featured website and shopping cart system that bends over backwards to give you the exibility you need to run your online store. The basic concept of the application is to allow the customer to shop virtually using the Internet and allow customers to buy the items from the store. The information pertaining to the products are stores on an RDBMS at the server side (store). The Server process the customers and the items are shipped to the address submitted by them. The details of the items are brought forward from the database for the customer view based on the selection through the menu and the database of all the products are updated at the end of each transaction.
